*Paxlovid and Molnupiravir are antiviral medications with oral tablet/capsule formulations that have received Emergency Use Authorization from the United States Food and Drug Administration for the treatment of COVID-19. Supplies are very limited and the medications are currently not available in commercial pharmacies. The United States Department of Health and Human Services has purchased allotments of these medications and are allocating them to medical facilities and skilled nursing facilities. The quantities of medications available and number of facilities receiving antiviral medications are expected to increase over the coming weeks.
